Introduction

Job finder websites are important tools for people looking for work and businesses searching for employees. As more people search for jobs online, it's important to have a website that is easy to use and works well on all devices. This project aims to create a simple, user-friendly job finder website to help job seekers and employers connect easily.

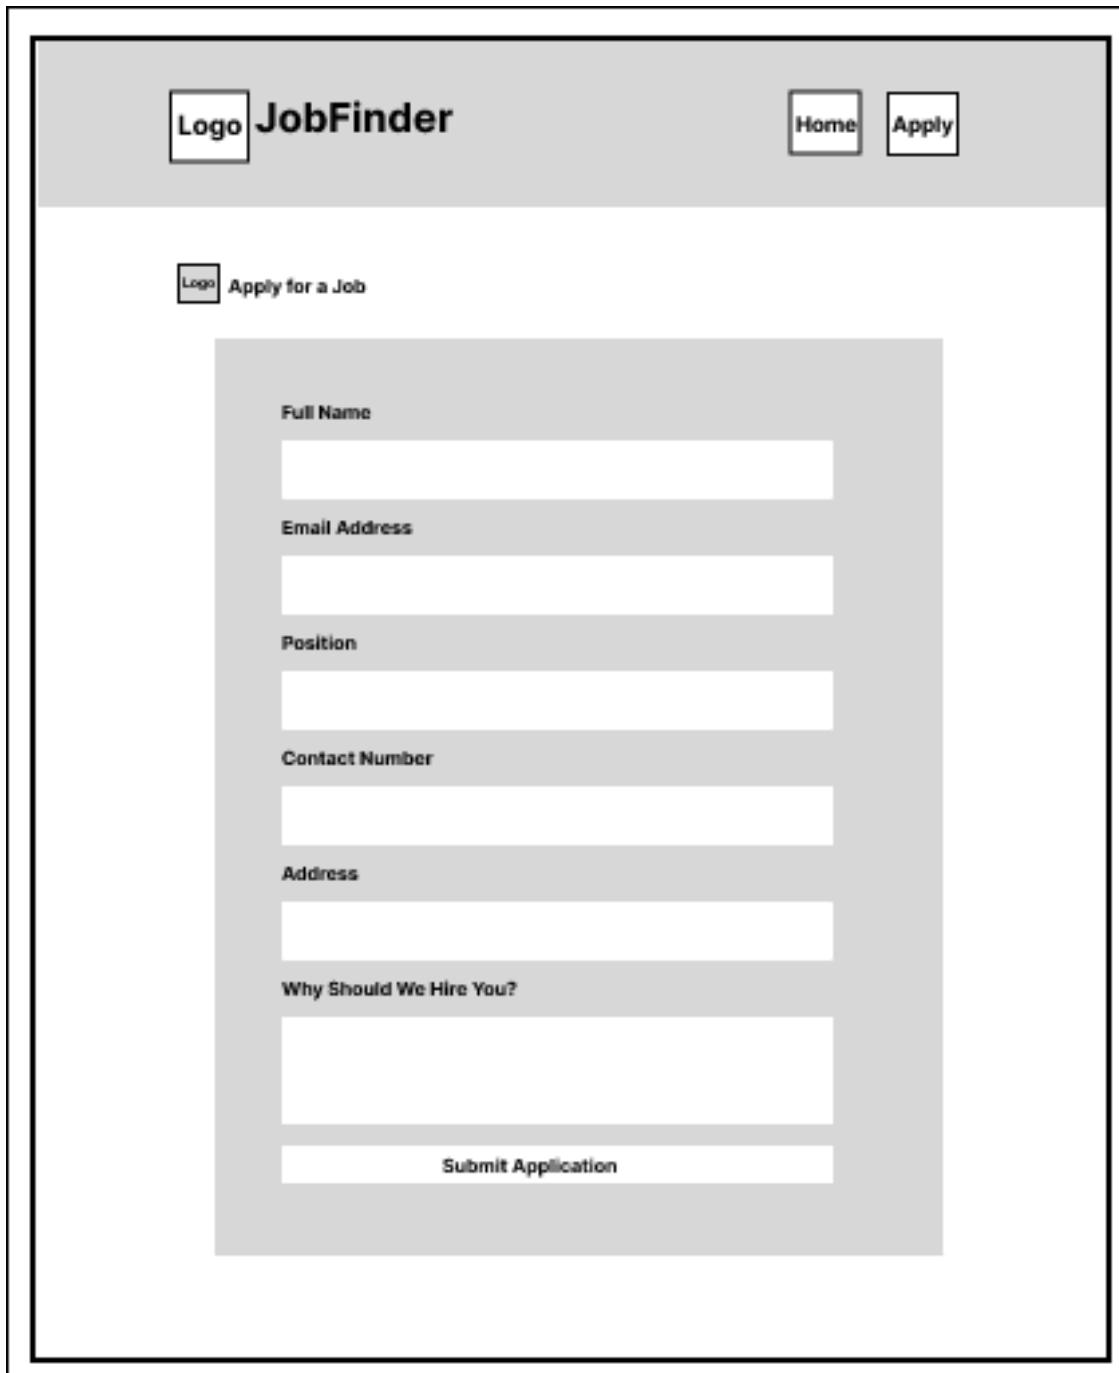

Many job websites today have problems, like being hard to navigate or not working well on mobile phones. This makes it frustrating for people to search for jobs and apply. Some websites also make it difficult for companies to post job openings. These issues can lead to missed opportunities and frustrated users (Indeed, n.d.; Jobvite, 2020).

This project will create a clean and modern job finder website using HTML, CSS, and W3.CSS. The website will allow job seekers to search for jobs and apply easily, while employers can post job listings without trouble (CareerFoundry, 2022; UX Design Institute, n.d.).

The main goals of this project are: to build a job finder website that works on all devices; to design pages like a homepage with featured jobs, a job list, job details, employer dashboard, and contact page; to make the website easy to use with helpful features like job search and filters.

In conclusion, this project will solve the common problems people face with job websites by focusing on easy navigation and a clean design. This will help job seekers find work and employers find the right people more easily.

Wireframe

The wireframe illustrates the layout of the JobFinder homepage. At the top left is the JobFinder logo. To its right are two buttons: "Home" and "Apply". Below the logo, a large rectangular form area contains fields for "Full Name", "Email Address", "Position", "Contact Number", and "Address". Each field is preceded by a label and followed by a horizontal input box. A question "Why Should We Hire You?" is also present with a corresponding input box. At the bottom of the form is a "Submit Application" button.

FIGURE 1.0 HOMEPAGE WIREFRAME

The wireframe diagram illustrates the layout of a 'Contact Us' page for the 'JobFinder' website. At the top left is the 'JobFinder' logo, followed by the 'JobFinder' brand name in a bold, sans-serif font. To the right of the logo are two square buttons labeled 'Home' and 'Apply'. Below the header, a large rectangular form area contains several input fields and labels. On the left side of the form, there is a vertical stack of labels: 'Full Name', 'Email Address', 'Position', 'Contact Number', 'Address', and 'Why Should We Hire You?'. Each label is positioned above a corresponding white input field. At the bottom of the form is a single horizontal button labeled 'Submit Application'.

FIGURE 1.1 CONTACT US WIREFRAME

The screenshot shows a code editor interface with three tabs open:

- PersonalFinance.java**: A Java file containing a single line of code: `System.out.println("Hello, World!");`.
- index(2).html**: An HTML file with the following content:

```
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8" />
    <meta name="viewport" content="width=device-width, initial-scale=1.0" />
    <title>Apply Now | JobBinder</title>
    <link rel="stylesheet" href="style.css" />
</head>
<body>
    <header>
        <div class="container">
            <h1>JobBinder</h1>
            <nav>
                <a href="index.html">Home</a>
                <a href="apply.html">Apply</a>
            </nav>
        </div>
    </header>
    <main class="container">
        <h2>Apply for a job:</h2>
        <form id="application-form" class="form-box">
            <label for="name">Full Name</label>
            <input type="text" id="name" name="name" required />

            <label for="email">Email Address</label>
            <input type="email" id="email" name="email" required />

            <label for="position">Position</label>
            <input type="text" id="position" name="position" required />

            <label for="contact">Contact Number</label>
            <input type="tel" id="contact" name="contact" required />

            <label for="address">Address</label>
            <textarea id="address" name="address" rows="2" required></textarea>

            <label for="description">Why Should We Hire You?</label>
            <textarea id="description" name="description" rows="4" required></textarea>

            <button type="submit">Submit Application</button>
            <div id="confirmation-message" class="hidden">Your application has been submitted. Thank you!</div>
        </form>
    </main>
    <br><br>

FIGURE 2.3 HOMEPAGE SCREENSHOT

The screenshot shows a web browser window with the address bar displaying 'C:/Users/kenji/OneDrive/Desktop/GROUP%20SA%20HCI/apply%20(2).html'. The page title is 'JobFinder' with a rocket icon. The main content area has a light gray background and features a large white rectangular form for job application. The form fields are labeled in blue text: 'Full Name', 'Email Address', 'Position', 'Contact Number', and 'Address'. Below these is a larger text area labeled 'Why Should We Hire You?'. A dark blue button at the bottom right of the form is labeled 'Submit Application'. At the top right of the page, there are 'Home' and 'Apply' links.
